## Bicycle and Pedestrian Counts

## Eight Week Report for <br> Eric E. Austin Memorial Bypass

(Formerly Referred to as the Marys River/Crystal Lake Multi-Use Path)

## March 8, 2021

## Prepared By:

Corvallis Area Metropolitan Planning Organization 777 NW 9th Street, Suite 204C
Corvallis OR, 97330

## Introduction

## Purpose of this Report

The purpose of this report is to provide an overview of bicycle and pedestrian count data collected by the Corvallis Area Metropolitan Planning Organization's (CAMPO) automated counter. This report covers eight weeks of counting on the Eric E. Austin Memorial Bypass (formerly the Marys River/Crystal Lake Multi-Use Path) in Corvallis. The eight week reporting period covered in this report began on Monday, November 23, 2020 and extended through Sunday, January 17. 2021. This represents the first full deployment of CAMPO's counting equipment.

## Counter Equipment and Set Up

In late 2019 CAMPO purchased two mobile MULTI bicycle/ pedestrian counting units. The equipment package is comprised of (1) a pyro-box utilizing passive infrared technology to detect the body heat of passing cyclists and pedestrians and (2) pneumatic tubes which capture air pulses generated by bicycles passing over them. The different types of trips are classified using an intelligent device called the Smart Connect which is capable of differentiating between pedestrians and cyclists. Data is then collected and stored to be analyzed with Eco-Counter software. ${ }^{1}$

Figure 1 and Figure 2 show the counter equipment set up in the field.

Figure 1: Counter Set Up

Figure 2: Pyro Box on Pole

## Count Location

The automated counting equipment was installed at the south entrance to the Eric E. Austin Memorial Bypass. Count equipment was set up across the path in order to log the number of cyclists and pedestrians and collect information on direction of travel. The count location can be seen in the map below (Figure 3).

[^0]Figure 3: Count Location

## Why Count People Walking and Riding Bicycles?

Program Purpose: Develop a better understanding of how people walking and riding bicycles are traveling throughout the CAMPO planning area.

## Program Goals:

1. Measure the long-term usage of bicycle and pedestrian facilities (including changes in use over time)
2. Evaluate the impact of projects
3. Understand safety trends
4. Help prioritize long-range infrastructure investment

## What is in this Document?

The remainder of this document provides an overview of data captured while the counting equipment was deployed in the field.

- Part 1 - Eight Week Summary Data provides summary information covering the entire eight week counting period and highlights several key statistics
- Part 2 - Daily \& Weekly Totals focuses on daily and weekly count totals including both aggregate data and information arranged in two week intervals
- Part 3-Hourly Totals breaks the data down into further detail providing a snapshot of hourly count data on a select number of days
- Part 4 - Weather Conditions explores daily temperature and compares daily high temperature with total number of counts

## Part 1 - Eight Week Sumary Data

Figure 4: Eight Week Summary Data

|  | Combined (Pedestrian + Cyclist) | Pedestrian |  |
| :---: | :---: | :---: | :---: |
| TOTAL | 8,669 | 4,207 | 4,462 |
| PERCENTAGE | 100\% | 48.5\% | 51.5\% |
| TOTAL NORTH BOUND | 4,692 | 2,277 | 2,415 |
| TOTAL SOUTH BOUND | 3,977 | 1,930 | 2,047 |
| \% NORTH BOUND | 54.1\% |  |  |
| \% SOUTH BOUND | 45.9\% |  |  |
| WEEKLY AVERAGE | 1084 | 526 | 558 |
| DAILY AVERAGE | 155 | 75 | 80 |

Figure 5: Weather Information ${ }^{2}$

| Average Daily High Temperature <br> During Reporting Period | Average Daily Low Temperature <br> During Reporting Period |
| :---: | :---: |
| 49.3 degrees | 36.6 degrees |

## Figure 17: Daily Temperature (Fahrenheit)

[^0]:    ${ }^{1}$ https://www.eco-compteur.com/en/produits/multi-range/mobile-multi/

[^1]:    ${ }^{2}$ Weather data is from weather.com
    Information on daily precipitation was initially collected for the first two weeks of the reporting period, however, additional data is no longer available at this point in time and therefore not included in this report.

[^2]:    ${ }^{3}$ The figure above uses color categories to illustrate variation in count totals. Darker colors mean a larger number of counts. For the "Combined Total" column: values less than $165=$ light orange; values between 165 and $200=$ medium orange; values over $200=$ dark orange. For the "Total Pedestrian" and "Total Cyclist" columns: values less than $80=$ light orange; values between 80 and $100=$ medium orange; values over $100=$ dark orange.
