### Corvallis CFA Candidates - PSU Anti-Displacement Map

The PSU Anti-Displacement Map is a data layer that differentiates neighborhood vulnerability based on typologies utilizing indicator sets in terms of income, vulnerable people, precarious housing, housing market activity, and demographic change at the census tract level. Tracts are compared to the county averages and designated into types based on high levels of different combinations of vulnerability, housing markets, and demographic changes. It is part of the Anti-Displacement and Gentrification Toolkit Project published by DLCD in 2021.
